

FANS FOR PORTABLE AND STATIONARY COMPRESSORS

The blades we offer for blowing systems are available in a variety of materials to operate in a wide range of operating temperatures.

We also provide ad-hoc analyses of new, special materials that can better meet your needs (i.e. ATEX).

The applications within the compressor segment require fans with extremely high pressure capabilities and with low noise signature.

Given the high volumes of compressors produced by the manufacturers, light weight, easy-to-assemble, cost effective fans are a key success factor for the compressor industry.

Not only do HasconWing® products meet all these requirements, but HW Ventilation offer also a kanban service that make our fans available at your site when you need them.
