

QUALYFAN LATEST VERSION AVAILABLE TO DOWNLOAD

DISCOVER QUALYFAN V. 1.2 NEW FEATURES

Rescaldina, 15/12/2021

HW Ventilation is glad to announce that the latest version of QUALYFAN selection software is now available to download.

We created QUALYFAN fan selection software to support our customers in their choice of the best axial fan for any particular application.

Our fan selection software is an extremely valuable source of technical information of our impellers' performances and their aerodynamic and noise diagrams.

Qualyfan latest version 1.2 includes a series of important **new features**, like:

- 'image' tab to visualize the drawing of the selected blade
- possibility to visualize only fans with a specific hub configuration
- update of the curves and performance data, which now include our new 'F' family of sickle-profile axial fans
- update of the complete curves: zero-max flow, max-zero pressure

To **download** our fan selection software, please fill in the form you will find at: https://www.hwventilation.it/en/download/download_software

If you already have an older version of Qualyfan installed on your computer, we recommend you to uninstall the obsolete program, before filling the form and download the new version of Qualyfan.

Should you need to install Qualyfan on a Mac, please download a Windows interface.

For instructions, refer to **Qualyfan manual**: <https://www.hwventilation.it/en/download/qualyfan-manual> or contact us at info@hwventilation.it
