

HASCONWING TYPE 'F' - LOW NOISE SIGNATURE IMPELLERS

THE IDEAL IMPELLERS FOR A WIDE RANGE OF APPLICATIONS

Rescaldina, 09/03/2022

Type 'F' fans are the best choice for applications which require **low noise emission levels and high efficiency at low rpm**. These fans are optimal for sprayers, compressors, industrial ventilation, ventilation of livestock, and many more.

'F' fans are manufactured assembling variable pitch, slightly sickle profile blades with a light aluminum alloy hub. The fans can have 3/4/5/6/8/9/12/16 blades configurations both for clockwise and anticlockwise rotation and can produce a sucking or blowing air flow. 'F' blades are available with right or left fixed setting angles ranging from 25° to 50°.
