

FAN-CLUTCH SYSTEMS FOR AGRICULTURAL SPRAYERS

Clutches for sprayers and atomizers

Our ferodo clutches are designed to be installed on 12 or 16 blade aluminum hubs. The blade configuration can be decided by the user (i.e. 12-12, 12-8, etc.) and the setting angles are variable and adjustable in the range of 20° - 50°, depending on the blade model.

The blades that can be employed with our variable pitch hubs can have an airfoil profile (TM), or a sickle profile (C, F) and are available in a huge variety of materials (polypropylene, polyamide, ATEX, aluminum).
